

Dear Sir/Madame,

HORUS - ENERGIA is a company, which for nearly 30 years has been designing, manufacturing, supplying and installing generating sets and cogeneration units based on piston engines fueled by natural gas, biogas and diesel.

We have the potential, to design and provide on installation, which will supply electricity, heat or cold from several kilowatts to more than two megawatts in a single unit with the ability to connect multiple units operating in parallel to gain almost unlimited total power output.

HORUS - ENERGIA offers gas cogeneration units based on engines provided by the following top-quality manufacturers: MAN, LIEBHERR, PERKINS, CUMMINS; professionalism and flexible approach to project within the consulting, production and lead time sets company apart from the other.

We are looking for Customers, which:

- demand for electricity power is not covered by power distribution system;
- power distribution system is in poor condition, or connection to grid is impossible;
- local production of electricity from natural gas leads to lower costs.

Power Gas / CHP units produced by HORUS - ENERGIA are the most reliable, fast to implement and easy to install compact energy source.
