

WŁOCŁAWEK DN 17.09.2014

CHEKO Manufacturing Plant, Ltd

Krzywa Góra 28

Włocławek 87-800

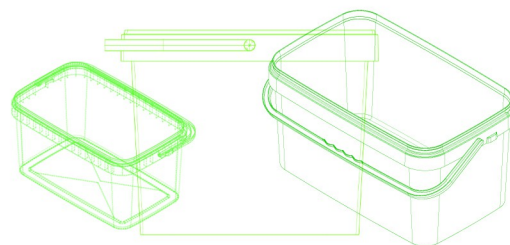

Poland

We are the first manufacturer in the world to produce oxy-biodegradable containers in the form of various kind of buckets which are 100% eco-friendly.

Thanks to the addition of d2w modifying agent to polypropylene our containers decompose into water, carbon dioxide, biomass and trace elements within just a few years, as opposed to a few hundred years in case of standard polypropylene. The technology which we use enables us to program the decomposition time.

Oxy-biodegradable containers are characterized by technical qualities and durability identical to these of traditional containers. They are also suitable for print.

In compliance with the European Directive 02/72/EC, containers produced with the addition of d2w can be used in direct contact with nutrition.

Used-up containers can be recycled, biodegraded (including composting) or simply left at a dumpsite.

With respect

Daria Thorsen
